

Quick Reference Guide

Introduction to Pick Your Own Numbers

Base Cost: \$1, \$2, \$3, \$4, \$5, \$10 or \$20 per drawing **Drawings:** Every four minutes (approximately 298 drawings per day)
Sales Cutoff: Two seconds before the drawing
Drawings Begin: 5:49 a.m. **Drawings End:** 1:37 a.m.

Keno is drawn at random from among the numbers 1 to 80. Players try to match up to 10 numbers (known as spots) per draw. The more spots players match, the more they can win.

NEW: The WAVE terminal now has manual entry for number of spots, cost per draw, number of draws, and the multiplier feature. Keno numbers are still Quick Pick only on the WAVE. PlayCentral terminal users will have the same choices along with the ability to select their own numbers or Quick Pick.

Players may still use a playslip to choose numbers for each of their desired spots or select Quick Pick for the computer to choose them at random.

Adding the Keno multiplier option multiplies the prize for a winning play by the multiplier number drawn (2X, 3X, 4X, 5X or 10X). For example, if a Keno player wins \$10, the Keno multiplier option was chosen at purchase, and the multiplier drawn was 3X, the player's prize would be \$30. Adding the Keno multiplier triples the total play cost (\$1 base play + \$2 Multiplier = \$3 ticket).

Players can also choose to play the same numbers for 1, 2, 3, 4, 5, 10 or 20 consecutive draws. The maximum play cost per playslip is \$1,200.
