Every Day.

Troubleshooting
What if the mobile coupon doesn't scan?
Below are several tips to assist with coupon scanning:

a. **Phone View:** If the barcode does not work in portrait view, rotate to landscape view and try again.

b. **Adjust Brightness:** Ask the player to adjust the brightness on their phone to the highest level and try again.

c. **Clean Screen:** Ask the player to wipe clean the phone's screen. Fingerprints and dust can impact the readability of the barcodes.

d. **Remove Screen Protector:** If a phone has a screen protector that is easily removable, have the player remove it and try again.

e. **Manual Entry:** Manually enter 16 digits underneath barcode (1) or inside the text message the player received (2).

1. **You can enter the barcode manually by typing the 16 digits. You must enter all 16 digits for it to work.**

2. **The 16 digits are also located in the text message the player received.**
